

CPT CONTROLS ON CME DRILLS

CPT controls on CME drills redefines “multi-purpose.” Our dedicated hydraulic CPT feed lever with detent position, adjustable CPT feed rate and pulldown pressure controls enable continuous push rates and pressures required for cone penetrometer testing. Depth transducer mount and anchor points can be provided. And if desired, a 12-volt power source can be located at the drill control panel to power electronic devices.

Combining CPT testing capability with an efficient CME auger drilling rig gives you the production you need in one machine, saving you the time and money commonly spent mobilizing a second machine when refusal changes the scope of the work.
