

DRILLING FLUIDS FOR CORE DRILLING & MUD ROTARY

A lot of power in a small package...

QUAD POWER™ polymer drilling products are a line of super concentrated drilling additives packaged for small diameter holes. This easy to use drilling fluids system starts with the Quad Power-Base, then supplement with the Power-Clay, Power-Terge, or Power-Sand depending on the formation. They can be mixed and matched as the geology changes, even within the same boring.

Ideal for diamond core drilling or mud rotary applications, this system can enable you to complete borings more quickly and efficiently as the hole diameter is better maintained and cuttings are cleared. And the small containers are easier to ship, store, and dispose of compared to the typical bulky plastic jugs.

POWER-BASE – 214162 certified NSF/ANSI/CAN
This highly concentrated liquid polymer produces a high-viscosity solution that is highly lubricating, clay inhibitive and can help remove fine solids from the borehole.
Packaging: 64 oz.

POWER-CLAY – 214163
A concentrated clay inhibitor when added to the Power-Base will greatly reduce or prevent clay cuttings from sticking to each other and to the drilling tools.
Packaging: 32 oz.

POWER-TERGE – 214164 certified NSF/ANSI/CAN
A liquid surfactant/detergent used with bentonite drilling fluids will help prevent rod-sticking and seizing. When added to Power-Base, it can create an extremely high-performance slurry for clay drilling.
Packaging: 8 oz.

POWER-SAND – 214165
A liquid polymer that will produce a high viscosity solution designed to suspend sand, silt and fine gravel. Also contains lost circulation materials and can produce a thin filter-cake on the borehole walls.
Packaging: 64 oz.

QUAD POWER PRODUCT APPLICATION RECOMMENDED PER 100 GALLONS FRESHWATER				
SOIL CONDITIONS	POWER-BASE	POWER-TERGE	POWER-CLAY	POWER-SAND
UNKNOWN	13 oz.	2 oz.		
SAND	13 oz.			26 oz.
SAND & GRAVEL	13 oz.	2 oz.		39-52 oz.
SAND & CLAY	13 oz.	2 oz.	6 oz.	26 oz.
CLAY	13 oz.	2-3 oz.	6 oz.	
STICKY CLAY	13-26 oz.	3 oz.	12 oz.
